## 📈 🚺 U.S. Presidential Economics

**Defense Spending** 

Bureau of Economic Analysis, Table 3.9.5, Gov't Consumption Expenditures & Gross Investment, Line 11 (billions)

Web link: http://www.bea.gov/iTable/iTable.cfm?ReqID=9&step=1

This spreadsheet accumulates the annual change in Defense Spending to an index value that is set at 1.00 in the first year of the analysis period. The index is then multiplied each year by (1 ± the annual change). The compound, or average, rate of return is then calculated during each presidential term by the formula: ((Ending index value / 8 beginning index value) ^ (1 / # years in analysis period) - 1). When multiple presidential terms are analyzed, the index value at the end of the last presidential term for that party carries forward and becomes the beginning index value for the next presidential term of that party. To adjust for inflation, each year's percentage change is divided by the fraction (annual % change) / (1 + inflation rate).
