

U.S. Presidential Economics

US Stocks

1929 to 2012

Source: Ibbotson 2012 SBBI Yearbook Table A-1 Compound annual return 1929-2011; for 2012, S&P 500 year-to-date return & dividend yield.

Web link: [Proprietary](#)

This spreadsheet accumulates the annual change in US Stocks to an index value that is set at 1.00 in the first year of the analysis period. The index is then multiplied each year by (1 ± the annual change). The compound, or average, rate of return is then calculated during each presidential term by the formula: ((Ending index value / Beginning index value) ^ (1 / # years in analysis period) - 1). When multiple presidential terms are analyzed, the index value at the end of the last presidential term for that party carries forward and becomes the beginning index value for the next presidential term of that party. To adjust for inflation, each year's percentage change is divided by the fraction (annual % change) / (1 + inflation rate).

Gross Nat'l Product
Personal Disposable Income
US Stocks
Corporate Bonds
US Gov't Bonds
Unemployment
Inflation
Interest Rates
Money Supply
Federal Debt
Federal Tax Receipts
Federal Spending

Inflation adjust: **Yes**
